

Kids question and answers-worksheets

I wonder why dogs scratch so much...

A scratches itself when it has fleas, or it might still have some soap on its body from when it washed, or it may need to be washed, or it may have ticks, which could have gotten when it was outside with other dogs.

I wonder why there are different tides...

Ocean tides are caused by the pull of the sun and the moon on the earth. When the moon is closed to a certain part of the earth, that area has high tides. When we have a full moon or new moon, we have very high tides called spring tides. At other times, the pull of the sun and the moon work against each other and the tides are lower. I like high tides because the fish comes to the shore.
