

## **Kids question and answers-worksheets**

### **I wonder where seashells come from...**

There are more than 65,000 kinds of molluscs. Next to insects, they are the molluscs live in the sea. When the molluscs grow, many grow shells to protect them from animals that might eat them. When they die, their shells are left behind. The shells float around in the sea until they wash up on the beach as seashells.

### **I wonder how fish get clean...**

There are special fish that act like cleaners. Some people call them “doctor fish” but their real name is wrasse. Wrasses help keep many other fish healthy and lean. Wrasses go into the mouths of other fish and remove pests, leftover food, bacteria and dead skin. For doing able to eat the things they pick off. They think it’s a free supper. This is one way fish get clean.
