

## **Kids question and answers-worksheets**

### **I wonder why it rains...**

Rain comes from big clouds, little clouds, black clouds and gray clouds. Rain may come from all over the sky. Clouds are made of little drops of water called droplets. Droplets are so small that you cannot see them. The droplets. Droplets are so small that you cannot see them. The droplets make a little loud. Water evaporates from lakes and rivers, from trees and grass and from the ground. Water evaporates and makes water vapour, which is carried by the air into the sky. The higher it goes, the colder it gets, and the vapour turns into water droplets, which turn to clouds.

### **I wonder why fog covers the ground...**

Fog is a cloud that forms so low that it lies near the surface of the ground or the surface of a body of water. Fog forms when the wind blows warm moist air over a cold surface.

Fog mostly forms during the night. It leaves the grass wet. You don't feel it, but you know it's there because you can see it. The fog doesn't last all day because it lifts and goes away. Then we can see the land again.
