

Kids question and answers-worksheets

I wonder why people get bruises...

When people bump a part of their body, it might turn blue or yellow the next day. This means small blood vessels in your body have been broken beneath the skin. When the blood goes out of these blood vessels, your skin turns blue or yellow. This is a bruise. When the blood vessels heal up, the bruise goes away.

I wonder what our bodies are made of...

Our bodies are made of cells. Even our bones and teeth are made of cells. Most cells are so small that you can only see them under a microscope. Every part of our bodies is made of cells. Our bodies are made up of trillions and trillions of cells.
