

## Kids question and answers-worksheets

### I wonder why the ozone layer is important to us...

The ozone layer is a layer made up of a form of oxygen that is in the upper atmosphere called the stratosphere. This layer is important to us because it shields the earth from much of the sun's ultraviolet light. Ultraviolet rays harm living tissues. Without the ozone layer, plants and animals probably could not live on Earth.

### I wonder where chalk comes from...

Chalk come from millions of tiny animal's shells which make up lime. When these animals die, their shells fall to the bottom of the water. Long ago, people found out that chalk is so soft that it can be used for writing. What fun to think we may be writing with the shells of little animals when we use chalk!
