

Kids question and answers-worksheets

I wonder why glue sticks...

Glue makes objects stick tighter by going through pores in their surfaces and then drying to form a hard bond. Glue is used for many, many things like toys and other things.

I wonder why the hair on our head keeps growing...

Hair grows by forming new cells at the root of each hair. As these new cells form, the old ones are pushed out of the opening in your scalp, called hair follicles, and die. As more cells die, your hair grows.

I wonder why sweets make your teeth fall out...

Sweets attract bacteria. Bacteria causes cavities, which are holes in teeth. Cavities cause your teeth to rot, and this makes your teeth fall out. We brush our teeth to help stop sweets from making our teeth rot.
