

## Kids question and answers-worksheets

### I wonder why the moon has craters...

The moon has large craters because asteroids and comets hit its surface. Many are more than a mile wide, but the largest is about 700 miles across.

### I wonder why astronauts can float in space...

Because there is no gravity to hold them down in space.

### I wonder why people travel to outer space...

We need to find out more information about what it is like to live in outer space. Maybe someday people will live in outer space and on other planets. Scientists are now trying to grow seeds in outer space.
