

Kids question and answers-worksheets

I wonder why people live in the Earth but not on Mercury...

People can't live on Mercury because it is the closest planet to the sun and it gets too hot. The temperature on Mercury is nearly 700° F during the day, but can drop to down to -300° F at night.

I wonder why the earth revolves around the sun...

The sun's gravity forces the earth to orbit around it. Each complete orbit around the sun is called a revolution. The earth takes 365 days, or one complete year, to make one revolution around the sun.

I wonder why nobody lives on Mars....

I suppose nobody lives on Mars because there is no oxygen on Mars. You wouldn't be able to breathe up there, and you have oxygen to breathe and grow. All living things need air and water to live.
